Pilatus PC-12, PC-12-45 and PC-12-47

LED LIGHTING INTERIOR UPGRADE

The PWI LED No Smoking/Seatbelt Light is a direct replacement for existing No Smoking/Seatbelt Light bulb boards.

Beechcraft King Air, Pilatus PC-12 and 1900 owners now have options when maintaining the Fasten Seatbelt/No Smoking light. This LED upgrade replaces the Teledyne part number 1202-300. By removing the stock light boards with bulbs, the PWI LED upgrade can be used in their place. The PWI LED upgrade uses the factory mounting holes.

It installs into the old board location without major changes to the fixture. There are two LED light boards in each kit – one for each side of the placard. The cost and inconvenience of replacing the entire placard is no longer required.
