ENGINE VIBRATION ISOLATORS TYPE 94016-02

Barry Controls™ Aerospace designs and manufactures engine vibration isolation systems to meet the exacting standards of the aircraft industry. These systems are designed to reduce the magnitude of vibration transmitted from the propeller/powerplant to the airframe. Isolation provides: reduced pilot fatigue, passenger comfort, and maximum protection of the aircraft structure and systems from the damaging effects of vibration. To maintain maximum performance and protection from the isolation system, replacement is recommended at each engine overhaul.

Barry Controls™ Aerospace has been granted Parts Manufacturers Approval (PMA) for vibration isolator type number 94016-02 for the aircraft listed below. Each engine vibration isolation system consists of four isolators. Each isolator consists of: two molded assemblies, a spacer, and an oversize OD washer. The spacer located between the two molded assemblies provides proper installation positioning and pre-compression.

APPLICATIONS

| AIRCRAFT MANUFACTURER | MODEL | POPULAR NAME | ENGINE(S) | ISOLATORS PER ENGINE | ISOLATORS PER AIRCRAFT |
|-----------------------|---|---|--|----------------------|------------------------|
