CONCORDE PROVEN

Concorde's STC for Agusta Westland AB139 & AW139 replaces standard nickel cadmium batteries with Concorde's PROVEN Valve Regulated Sealed Lead Acid RG® Series batteries.

There is nothing more important for starting a mission than a strong and dependable battery. A healthy battery reduces the wear and tear on the engine and its associated starting components during the cranking phase and delivers essential emergency power in the case of a generator failure. Concorde's certification provides the option to replace AB139/AW139 nickel cadmium auxiliary and main batteries with similar capacity Concorde Sealed Lead Acid batteries or with a higher capacity RG-380E/60L (48 Ah) Concorde main battery. RG-380E/60L is constructed with additional plates for increased cranking power, faster starts and less engine wear.

RG® Series batteries versus Nickel Cadmium:

- More economical cost of acquisition
- Reduced cost per flight hour
- No maintenance
- No memory effects
- No risk of thermal runaway
- Ship Hazmat exempt
- Advanced Sealed Lead Acid AGM technology

RG-407 (27 Ah) is TSO Approved
Replaces Ni-Cd (27 Ah)

RG-380E/44L (42 Ah) or
RG-380E/60L (48 Ah)
Both are TSO Approved
Replaces Ni-Cd (44 Ah)

US – SR03072NY | Canada – SH11-47

Brazil – 2012504-04 | EASA – 10043385

STC and batteries are available from Concorde's worldwide network of distributors!
