- Upgraded to the latest OEM-approved

Offer is valid from November 1st, 2016 through January 31st, 2017
with deliveries scheduled from January through March 31st, 2017

“PPG is pleased to offer operators an extended warranty (36 months) on these rebuilt windshields as a result of their exceptional reliability that is comparable to the new parts,” Mark Hood, PPG global director, general aviation transparencies, said. “As the manufacturer of the certified original-equipment windshields for the King Air and spares for both the King Air and 1900 airplanes, PPG rebuilds parts to the latest Beechcraft-approved design configuration. Aircraft operators have lower-cost alternatives to buying new spares without compromising performance or quality, and now PPG supports that with an even longer warranty - **now to 36 months.**”

Hood attributed the proven performance of the PPG-rebuilt windshields and OEM parts to proprietary robust heating systems and moisture seals that protect the windshields from environmental degradation.

PPG is certified by the Federal Aviation Administration to rebuild windshields and uses the same materials and processes to rebuild the King Air and 1900 windshields as it does for new parts. Rebuilt windshields for King Air airplanes are supplied with SURFACE SEAL® hydrophobic coating, as are new and spare windshields. The company is based in Huntsville, Alabama where it operates an FAA-certified Repair Station. KADEX Aero is our Canadian Distributor.
